#### PRESENTATION OF DISCONTINUED 1965 COMMODITIES IN 1966 QUARTERLY REPORTS

Effective January, 1966 a total of 128 new commodity classes was introduced and 116 classes discontinued. The codes of six additional classes were changed in 1966, but in these cases there was no change in the description or coverage of the classes.

Of the discontinued commodity classes, 80 were re-numbered to improve commodity comparisons in 1966 quarterly reports. The class numbers for the remaining 36 discontinued commodities have been retained simply because it was impossible to improve commodity comparisons by re-numbering; for these commodities, no quantity or value is shown in the 1966 columns.

In five other cases, where the coverage of 1965 commodity classes was altered in 1966, figures for 1965 were included in the appropriate n.e.s. class within the same commodity group to avoid inaccurate comparisons of figures for the two years. In all five cases, no quantity or value is shown in the 1965 columns.

Table I shows the class numbers under which totals for discontinued 1965 commodities, and commodities whose coverage was changed, are presented in the 1965 columns of 1966 quarterly reports, together with the original 1965 class numbers.

Table II lists the 36 discontinued commodity classes which have retained the same class number in these reports. For these classes no statistics appear in the 1966 columns.

Table III lists the new 1966 commodity classes for which there are no direct 1965 commodity comparisons.

## EXPLANATORY NOTES

1. **Source of Data:** Import documents collected by Customs are the basic source of import statistics, except for data on imports of electricity and on imports of aircraft imported for use as international carriers. These two types of imports are reported by the importing firms directly to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any period include all goods declared on import entries received at DBS during the calendar period, and on electricity reports received within the following calendar month. There is usually a lapse of one to two weeks between the actual customs clearance of imports and receipt of the relevant documents in DBS. Electricity imports are usually included in statistics for the period in which these imports actually occurred. Reports on aircraft imported as international carriers are received quarterly, but the aircraft can usually be included in statistics for the period in which the imports actually occurred.
3. **Coverage:** From January 1, 1964, imported statistics have included all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouses and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January-March, 1964 issue of this report.

The following commodity movements are excluded from import statistics: gold and gold products where the value of the gold content is 80% or more of the total value except for dental gold alloy (class 880-27) and a small amount of gold scrap in the form of jewellers' sweepings (class 258-99); current coin; settlers' effects; private donations and gifts; tourist purchases exempt from duty; goods imported by foreign armed forces of diplomats stationed in Canada or brought back by Canadian armed forces or diplomats returning from postings outside Canada; temporary imports for exhibition or competition, and most goods imported for Expo 67; and film imported for exhibition or processing or returned after exhibition or processing abroad; ships of British construction and registry imported for use in Canada, and ships purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory. Until January 1, 1966, aircraft purchased for use as international carriers and not used to carry goods between points in Canada were also excluded.

4. **Countries Credited:** Imports are credited to the country in which the goods were located when first directed to Canada, except for goods produced in Central or South America but first consigned to Canada from the United States, which are credited to the country of origin.
5. **Quantities:** Table 2 shows quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I (DBS Catalogue No. 12-524). Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). All units of quantity used in this report are defined on page 5.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. values for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1960); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$50,000 or more (from January, 1965; when this check was introduced in January, 1964 it covered only shipments individually valued at \$100,000 or more). Only about one-quarter of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of commodities used in this report are abbreviated or incomplete. Full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each quarterly report.

DOMINION BUREAU OF STATISTICS

External Trade Division

ELIMINATION OF COMMODITY DETAIL ON ALL IMPORTS  
VALUED LESS THAN \$200.

The July, 1964 issue of the monthly report "Imports by Commodities" presented in the blue inserts, the results of studies on the elimination of commodity detail coding for single entries valued from \$100 to \$199 and for lines valued between \$50 and \$99 on larger entries totalling more than \$200. By September 1965, however, improvements in timeliness in import statistics made it appropriate to re-introduce a less extensive limit on entries totalling \$200 or more by coding lines over \$50 on multiple entries. This limit was adopted as a temporary measure to assess more precisely the effect of small value components on import statistics and to analyse the results of the small values on aggregates compiled by tariff item.

Beginning with January 1966, import statistics, a new change has been introduced on coding entries of small value components: the elimination of commodity coding of all entries valued at less than \$200. This further change was made necessary by the continuous increase in the volume of entries received each month and the adoption of a new tariff structure in August 1965, which calls for additional coding by tariff items. Import entries tend to move in larger volume since the last part of 1965, therefore the new coding limit will not bring any further appreciable damaging effect than was the case with the former coding limits.

Although fresh or chilled fruits (commodity group 71-), and fresh or chilled vegetables (commodity group 91-), are imported in large quantities, the values of individual commodity classes on mixed entries are often between \$50 to \$199. Entries for fresh fruits falling into this category exceed 1000 lines each month while mixed entries of fresh vegetables exceed 2,500 lines each month. To reduce damage which would result from the elimination of coding entries under \$200., it was felt desirable to establish an exception for these two commodity groups and to code to their respective classes values between \$50 to \$199 contained on multiple commodity entries. Coding of fresh fruits and fresh vegetables requires little additional time as these commodities are very familiar to coders, usually well described and seldom present serious difficulties. Values coded to appropriate classes under this new limit amount to approximately \$150,000 a month for fresh fruits and to some \$280,000 for fresh vegetables.

The limit of \$200 is applicable not only to individual entries valued at less than \$200, as was the case since July, 1964 but covers also lines valued between \$50 to \$199 for the multiple commodity entries over \$200, (except groups 71- and 91-).

The present study is based on the analysis of small value components over a period of 5 months in 1964 and 5 months in 1965, supplemented by additional analysis of the effect of a uniform \$200 limit on the preliminary statistics available for 1966 when the new coding limits became fully effective.

Table 3. LIST OF CLASSES REDUCED BY 10% OR MORE BY ELIMINATION OF COMMODITY DETAIL  
FOR ENTRIES VALUED \$100 - \$199 AND LINES VALUED \$50 - \$199 ON MULTIPLE  
LINE ENTRIES

NOTE: Classes marked with an asterisk (\*) are expected to be reduced by more than 25%.

## EXPLANATORY NOTES

1. **Source of Data:** Import documents collected by Customs are the basic source of import statistics, except for data on imports of electricity and on imports of aircraft imported for use as international carriers. These two types of imports are reported by the importing firms directly to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any period include all goods declared on import entries received at DBS during the calendar period, and on electricity reports received within the following calendar month. There is usually a lapse of one to two weeks between the actual customs clearance of imports and receipt of the relevant documents in DBS. Electricity imports are usually included in statistics for the period in which these imports actually occurred. Reports on aircraft imported as international carriers are received quarterly, but the aircraft can usually be included in statistics for the period in which the imports actually occurred.
3. **Coverage:** From January 1, 1964, imported statistics have included all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouses and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January-March, 1964 issue of this report.

The following commodity movements are excluded from import statistics: gold and gold products where the value of the gold content is 80% or more of the total value except for dental gold alloy (class 880-27) and a small amount of gold scrap in the form of jewellers' sweepings (class 258-99); current coin; settlers' effects; private donations and gifts; tourist purchases exempt from duty; goods imported by foreign armed forces of diplomats stationed in Canada or brought back by Canadian armed forces or diplomats returning from postings outside Canada; temporary imports for exhibition or competition, and most goods imported for Expo 67; and film imported for exhibition or processing or returned after exhibition or processing abroad; ships of British construction and registry imported for use in Canada, and ships purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory. Until January 1, 1966, aircraft purchased for use as international carriers and not used to carry goods between points in Canada were also excluded.

4. **Countries Credited:** Imports are credited to the country in which the goods were located when first directed to Canada, except for goods produced in Central or South America but first consigned to Canada from the United States, which are credited to the country of origin.
5. **Quantities:** Table 2 shows quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I (DBS Catalogue No. 12-524). Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). All units of quantity used in this report are defined on page 5.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. values for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1960); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$50,000 or more (from January, 1965; when this check was introduced in January, 1964 it covered only shipments individually valued at \$100,000 or more). Only about one-quarter of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of commodities used in this report are abbreviated or incomplete. Full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each quarterly report.
